Applications

PelletVent is designed for venting of pellet stoves and inserts. Consult appliance manual for additional requirements.

Materials and Construction

PelletVent is a double-wall pipe, with a stainless steel inner wall and galvalume outer wall.

Black painted product available.

Clearances

1" clearance to combustibles for appliances using wood pellets.

Diameters

3" & 4"

Listings

c-UL-us Listed to UL 641 (MH8381 and MH14420).

UL 641System

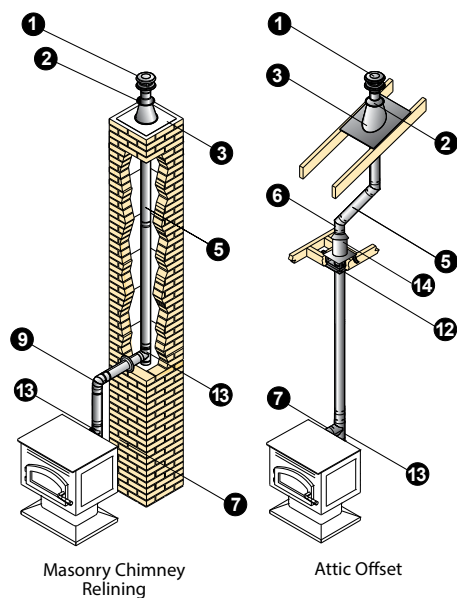

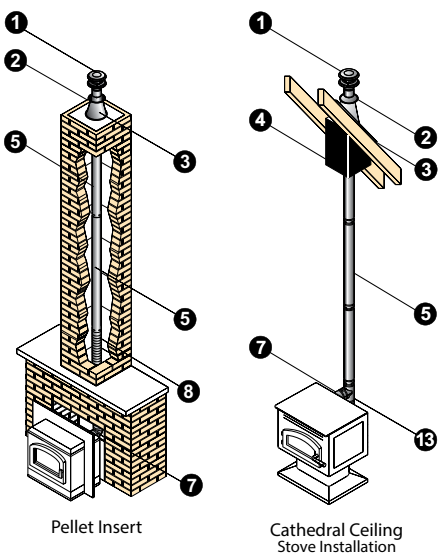

PelletVent for multi-fuels

PelletVent is an innovative venting system for pellet stoves and inserts. Select components are available in black to enhance interior aesthetics.

PelletVent is UL listed for 1" clearance to combustibles in the USA. Its double-wall, air-insulated design offers superior performance. PelletVent seams are factory-sealed on all elbows, tees, and fittings.

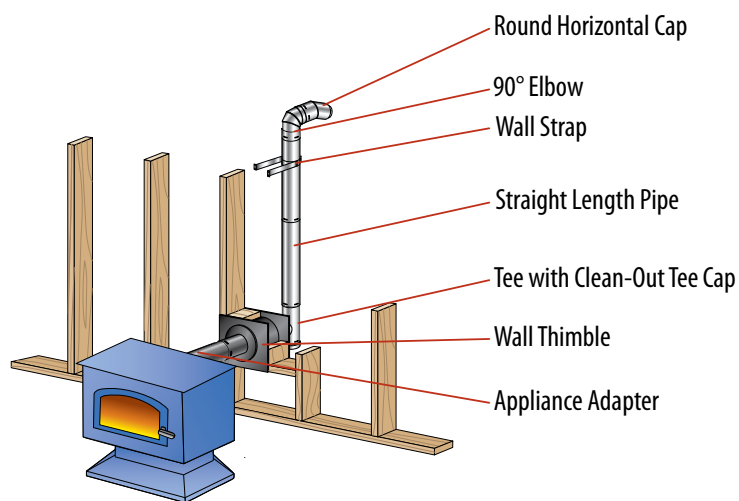

Typical Installations

Installation Key			
1	Vertical Cap	8	60" Flexible Length
2	Storm Collar	9	90° Elbow
3	Flashing	10	Horizontal Cap
4	Cathedral Ceiling Support Box	11	Wall Thimble
5	Pipe	12	Ceiling Support Firestop Spacer
6	45° Elbow	13	Tee w/Clean-Out Tee Cap
7	Appliance Adapter	14	Attic Insulation Shield

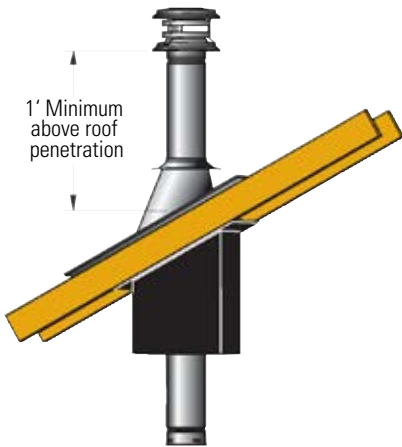

- Refer to our Typical Venting Installation drawings to select the appropriate component parts for your installation.
- The inner pipe diameter should match the outlet size of the appliance. For installations that require 4" vent and the appliance has a 3" outlet, use an Increaser Adapter 3"-4".
- Check the appliance manufacturer's installation instructions to confirm which types of vent configurations are permitted (i.e. horizontal, vertical, chimney reline, etc.). Also, check for any venting restrictions such as maximum horizontal run, minimum and maximum vertical rise, maximum offset, etc.
- Be fire safe! Maintain the minimum clearances (air-space) between the vent pipe and nearby combustibles, as specified in the appliance manufacturer's installation instructions. Use proper support and bracing. Follow local building codes and have your venting system inspected.

Planning Your Installation

1	Refer to the Typical PelletVent Installations diagram, on the opposite page, to be familiar with some of the standard PelletVent installations and the required component parts.
2	For a horizontal termination, you will need a Wall Thimble and a Horizontal Cap. The cap must be installed with a 6" clearance to the outside wall (refer to appliance manufacturer's installation instructions for other clearances).
3	For a vertical termination, you will need a Cathedral Ceiling Support Box or Flat Ceiling Support, Attic Insulation Shield (if passing through an attic), Flashing, Storm Collar, and Vertical Cap.
4	Determine the length of PelletVent pipe required. For a vertical termination, measure the pitch of the roof and select the proper flashing. The required minimum height above the roof is 12".
5	Pellet stove inserts in masonry fireplaces will require a flex pipe to snake the vent past the smoke shelf. For transition from PelletVent to an existing DuraPlus Chimney, a Chimney Adapter is available.
6	For vertical rise of PelletVent on the outside of the house, Wall Straps should be used at 4' intervals to provide proper support.
7	Important! Check to be sure that the appliance and the venting system are in compliance with all minimum clearance to combustibles requirements.

Design Recommendations

The following design recommendations are intended only as a general guideline to assist in the design and selection of venting components for your installation. Always read and follow Installation instructions before installing your chimney system (found with the cap or support box). Installation instructions can be viewed online at www.duravent.com, under Catalogs and Instructions.

- Size the vent to meet the appliance manufacturer's specifications.
- Avoid long runs and excessive use of elbows. Refer to the appliance manufacturer for minimum rise and maximum run configurations for the venting system.
- Use an Appliance Adapter to ensure a proper connection to the appliance. Seal adapter to appliance with high temperature sealant.
- Use a Single Tee with Clean-Out Tee Cap to facilitate easy cleaning. It is recommended to use a tee off the back of an appliance.
- Maintain the minimum 1" clearance (air space) from vent pipe to combustibles. Use proper support and bracing. Follow local building codes and have your venting system inspected. Be fire safe!

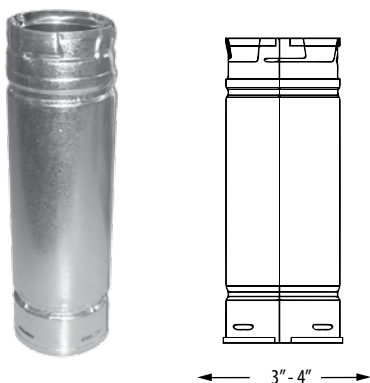

Horizontal Kit

Kit includes: Round Horizontal Cap, 90° Elbow, Wall Strap, Five 12" Pipe Lengths, Tee with Clean-out Tee Cap, Wall Thimble, Appliance Adapter.
4" Kit includes a 3"-4" Appliance Adapter/Increaser.
