

Why Choose Double Wall Stove Pipe?

Double Wall Stove Pipe was designed to work with your Stainless Steel SuperVent Chimney to form a complete Wood Stove Venting system!

Double Wall Stove Pipe is a superior product in a number of ways:

- clearances are reduced to 6" from combustibles (vs 18" for single wall pipe)
- it lasts significantly longer
- high quality, scratch resistant black finish
- adjustable Lengths mean no cutting pipe to fit your installation
- Listed, Certified and Labelled to UL Safety Standards
- Lifetime Warranty on all components

DOUBLE WALL vs SINGLE WALL STOVE				
Product	Tested & Labelled	Material	Clearances to Combustibles	Warranty
Model DSP Double Wall Stove Pipe	To ULC S641	Heavy Gauge Stainless Steel / Aluminized Steel	6 Inches	Lifetime Warranty
Single Wall Stove Pipe	Not Tested or Labelled	Light Gauge Carbon Steel	18 Inches	*No Warranty

* If a wood burning appliance is used every day in the heating season, surveys have shown that a single wall stove pipe will need replacement every two or three years.

The Stainless Steel inner liner, 1/4" air space and Aluminized Steel outer casing provide superior insulating qualities compared to single wall pipe. This enhances the performance of your wood stove by improving draft (which prevents "smoking"). Double Wall Pipe also reduces potential creosote build-up, to prevent chimney fires - making your Chimney system safer and longer lasting.

Use what the Pro's use - Double Wall Stove Pipe!
