About Polyflue

Polyflue is a simple and complete venting system providing the ultimate installation flexibility. Polyflue is made of flame retardant polypropylene (PPs), a credible and superior material for condensing gas fired heating appliances when compared to PVC/CPVC. It is a safe and economical approach to high efficiency heating appliance venting.

Benefits of Polyflue include:

1. Tested & listed by UL to the **complete** ULC S636 test standard as a Type BH Class IIC Gas Vent with 15" w.c. positive pressure rating, for Category II & IV appliances.
2. Maximum flue gas temperatures are 230°F / 110°C (53% higher than PVC), giving extra insurance on an over-firing boiler.
PVC is only safe to 150°F / 65°C, CPVC to 194°F / 90°C, regardless if they have a UL listing or not.
3. 0" clearance to combustibles.
4. 10 year limited warranty as opposed to little or nothing from PVC/CPVC manufacturers.
5. Environmentally-friendly production process unlike that of PVC/CPVC and is fully recyclable.
6. Wind tunnel testing on concentric terminations.
7. No toxic primer or cement, just soapy water & a locking band.
8. The UL required locking bands can be installed during or *after* the installation of the vent system, providing ultimate installation flexibility and negating the need to disassemble the pipe if accidentally overlooked by the installer. Other polypropylene manufacturers' locking mechanisms must be installed during the installation and cannot be installed afterwards without dismantling the vent system.
9. As with any condensing system, proper condensate management is required. Polyflue requires a 3/8" per foot upward slope (2°) for horizontal systems draining back to the appliance or condensate drain section.
10. Flexible pipe can be installed into (3) different vertical construction scenarios:
 - a) combustible enclosure/chase
 - b) existing unused metal vent system
 - c) existing unused masonry chimney
11. White UV rated parts for attractive exterior applications.

Polyflue is your answer for an easy, economical, yet safe approach to high efficiency appliance venting.

Typical Installations & Surroundings

This system may be installed in any combination of vertical or horizontal, enclosed or unenclosed configurations. The total length and number of fittings should not exceed the appliance manufacturer's recommendations. This system (with flexible pipe) may also be installed within an existing, unused masonry chimney, unused B-vent or chimney system. The flexible pipe system may only be used vertically and can be used in all installations (combustible enclosure, masonry chimney, or B-Vent / chimney system) & is limited to 66 feet in height.

4" (100mm)	3.46" (88mm)	4PF-TCD	834014

- Used to drain condensate away when using a Tee at the base of a vertical system or if Tee is used horizontally (branch pointing down)
- Requires 7/8" diameter condensate tube (CDT, sold separately)

Condensate Drain Tube / PF-CDT

"A"	Model #	Part #
10' (3048mm)	PF-CDT	833100

- 7/8" (18mm) diameter vinyl tubing
- Used to drain condensate away from inline drains (CD), or drain tee caps (TCD)

Inline Condensate Drain / PF-CD

Diameter	"A"	"B"	Model #	Part #

4" (100mm)	19.69" (500mm)	4PF-FLEX	834039

- 66 foot roll, for use with vertical vent systems only
- Field cut in 20" or 40" increments, as necessary (see instructions)
- Accessory parts for complete installation sold separately (FLEX-KIT) for lining masonry chimneys.
- Can be used for a single appliance to re-line unused vent systems. Reference PF-BVSC and instructions
- Can be used as a single continuous vent system in a multi-story vertical combustible chase at 0" clearance
- Reference instructions for friction loss (equiv length)
